SUMMARY

Full-stack Software Engineer with 5+ years of experience building web applications, APIs, and integration-heavy systems. Strongest in TypeScript and React, with experience building frontend applications, API integrations, and GraphQL and REST-based services, plus backend experience in Java. After taking time away from full-time engineering for family responsibilities, I'm focused on returning to a hands-on engineering role and contributing to a strong team.

SKILLS

Languages: TypeScript, JavaScript, Java, SQL

Frameworks & Technologies: React, Node.js, GraphQL, REST APIs

Tools: Jest, AWS, Docker, Kibana

EXPERIENCE

Software Engineer | [Viasat](#) *Oct 2021 – Jul 2023*

- Partnered with another engineer to rebuild the billing micro-frontend as part of a company-wide shift to micro-frontend architecture.
- Built a GraphQL integration layer for billing workflows, adapting queries as the backend evolved from an external vendor to an internal solution and removing an unnecessary service from the stack.
- Migrated the billing micro-frontend into a company-wide monorepo, adopting shared Redux state management and styling conventions.
- Built a post-payment rating prompt for mobile users, contributing to a positive shift in App Store ratings following launch.
- Rotated on issue triage for the consumer satellite internet division, using Kibana to investigate production issues and resolve account-specific escalations.

Software Engineer (Contractor) | [Kforce at Viasat](#) *May 2020 – Oct 2021*

- Developed and maintained a customer-facing web and mobile app for managing satellite internet accounts, billing, and self-service troubleshooting.
- Developed request-processing logic and versioned input/output schemas for an internal REST API (built on the company's PAC platform), which saw adoption expand across teams beyond its original scope, with ownership repeatedly returning to me for maintenance and support.

Jr. Software Engineer | [Moebius Solutions](#) *Jul 2018 – May 2020*

- Built geospatial visualization tools for the Phoenix Prototype platform, including interactive map layers and shared API utilities.
- Built and maintained microservices using Express, Apollo Server, GraphQL, and TypeScript.
- Contributed to feature development in a large legacy Java-based command-and-control platform supporting military tracking and situational awareness.

EDUCATION

B.S. in Computational Mathematics | [University of California, Riverside](#) *Jun 2018*
