SUMMARY

Full-stack Software Engineer with 5+ years of experience building scalable web and mobile applications, microservices, and cloud infrastructure. Proficient in React, TypeScript, and Java, with a track record of delivering clean, maintainable code across consumer-facing and internal platforms. Actively returning to full-time engineering after stepping away to manage family operations, and eager to contribute to a product-focused engineering team.

SKILLS

Languages: TypeScript, Java, SQL, JavaScript

Frontend: React, React Native

Backend: Node.js, GraphQL, Apollo Server, Express, REST APIs

DevOps & Cloud: Docker, Kubernetes, OpenShift, AWS, Kibana

Testing: Jest, Enzyme

EXPERIENCE

Operations Lead | [Family Business – Carpet Cleaning Services](#) Sep 2024 – Present
Temporarily stepped away from software engineering to manage day-to-day field operations while a family member recovered from a medical emergency. Actively seeking to return to a full-time engineering role.

Software Engineer | [Viasat](#) Oct 2021 – Jul 2023

- Served as primary engineer on a full rebuild of the billing micro-frontend as part of a company-wide shift to micro-frontend architecture.
- Built a GraphQL server that talked directly to the billing backend, consolidating multi-step operations (product lookup, cart creation, add-ons) into clean API calls and eliminating an unnecessary intermediate service from the stack.
- Migrated the billing micro-frontend into a new company-wide monorepo, adopting shared Redux state management and styling conventions to align with the broader platform.
- Built a post-payment rating prompt for mobile users; the feature drove a measurable increase in App Store ratings after launch.
- Rotated on issue triage for the consumer satellite internet division — used Kibana to investigate production errors and resolve account-specific escalations.

Software Engineer (Contractor) | [Kforce at Viasat](#) May 2020 – Oct 2021

- Developed and maintained a customer-facing web and mobile app for managing satellite internet accounts, billing, and self-service troubleshooting.
- Contributed to an internal REST API that supplied customer account data to multiple teams across the organization.

Jr. Software Engineer II | [Moebius Solutions](#) Jul 2018 – May 2020

- Built geospatial visualization tools for the Phoenix Prototype platform, including interactive map layers and shared API utilities.
- Solely implemented microservices using Express, Apollo Server, and GraphQL with TypeScript, including dynamic queries and mutations.
- Contributed to GCCS-J Mod, a globally distributed cloud service providing real-time situational awareness to military operators.

PROJECTS

Drops — Raid Loot Optimization Tool | [Personal Project](#)

2022 – Present

- Built a Next.js app for comparing World of Warcraft loot simulation data across raid bosses, players, item slots, and armor types — used by an active progression raid team.
- Fetches report IDs from a published Google Sheets CSV via API routes, loads and validates external simulation data, and normalizes it into boss- and player-grouped views.
- UI state managed with Redux Toolkit; user preferences persisted via local storage and cookies so server-rendered defaults match the client. Stack: Next.js, React, TypeScript, Redux Toolkit, MUI.

Royal Carpet Specialists — Business Website | [Freelance](#)

2026

- Built a full marketing site for a local owner-operated carpet cleaning business, including service pages, a before/after gallery, FAQ, and contact page.
- Integrated Cloudinary for image management and optimized delivery; implemented before/after comparison sliders and an auto-scrolling recent work carousel. Stack: Next.js 16, React 19, TypeScript, Tailwind CSS 4, Cloudinary.

EDUCATION

B.S. in Computational Mathematics | [University of California, Riverside](#)

Jun 2018
