SUMMARY

Software Engineer with experience in full-stack development, DevOps, and cloud infrastructure. Skilled in React, TypeScript, and Java, with a proven track record of building scalable applications and microservices. Motivated to deliver clean, efficient code, optimizing workflows, and improving user experiences.

SKILLS

Programming: TypeScript, Java, SQL

Frontend: React, React Native

Backend: Node.js, GraphQL, Express, Apollo Server, REST APIs

DevOps & Infrastructure: Docker, Kubernetes, OpenShift, AWS, Kibana

Testing: Jest, Enzyme

EXPERIENCE

Family Business – Carpet Cleaning Services

Field Operations

September 2024 - Present

- Drove between residential and commercial job sites, transporting cleaning equipment and supplies.
- Assisted with setup, hose management, equipment handling, and job-site breakdown.
- Collected customer payments and confirmed service completion with clients.
- Supported day-to-day operations while assisting family business continuity during owner recovery.

Viasat

Software Engineer

October 2021 – July 2023

- Developed a micro-frontend for the Manage Billing team with a GraphQL backend, improving billing visibility for customers and internal Salesforce agents.
- Assisted with issue triage for consumer satellite internet division, reviewing and routing JIRA tickets to the appropriate teams on a rotating basis.
- Utilized Kibana to analyze response times, investigate production errors, and troubleshoot account specific issues escalated through the triage system.

Kforce (Contractor at Viasat)

Software Engineer

May 2020 – October 2021

- Developed and maintained MyViasat, a web and mobile application for managing customer accounts, billing, and troubleshooting.
- Worked on Pac Customer Self Care, a REST API providing customer account information for various internal teams.
- Improved API efficiency, reducing data retrieval times and enhancing overall system reliability.

Moebius Solutions

Jr. Software Engineer II

July 2018 – May 2020

- Developed geospatial visualization tools for Phoenix Prototype, including map layers and common API technologies.
- Built microservices using Express, Apollo Server, and GraphQL, featuring TypeScript-based dynamic queries and mutations.
- Contributed to the GCCS-J Mod project, a globally accessible cloud-based service for real-time situational awareness.
- Represented my team during Agile quarterly planning conferences.
- Modernized the Recap UI for Sony's crash reporting software, replacing a GWT frontend with React, React Router, and Material UI.

EDUCATION

University of California, Riverside

B.S. in Computational Mathematics, June 2018
